

Most important features for the Declarant Portal for release CBAM 1.3.1.3

CBAM 1.3.1.3 - Available in production as of 30/11

Main features/ changes:

- 30-minutes user session timeout: the system will automatically log-out declarant users after 30 minutes of inactivity. Count-down of the time remaining before automatic log-out is displayed on the information bar and a warning message requesting extension of user session is displayed (otherwise session is invalidated).
- Warning messages appear for the Declarants in case of installation operator, installation or production method is not defined.
- Email notification is sent to the Declarant in case of request from NCA. The details of the request can be viewed in the system.
- The supporting document “Reference Number” field, both at Good level and at Emission level, has now become optional.
- Carbon Price Due – the “Additional Information” field has become optional.
- Warning message appears if the “Good Net Mass” is above 500k tones.
- When “Actual data is not available” is selected in “Type of Determination” (Direct or Indirect), a guidance text appears on the emission tab about the actions that need to be taken.
- Installation city and post code have now become mandatory, whenever an Installation is defined.
- Operator post code has now become mandatory whenever an Operator is defined.
