Introduction

This document contains a country-specific excerpt from the 2023 VAT gap report. The full report includes more detailed methodology discussions and country-specific information for all 27 EU Member States concerning VAT compliance. It can be downloaded here [VAT Gap - European Commission](http://europa.eu).

Value Added Tax (VAT) in the European Union (EU) is a broad-based tax levied on goods and services used or consumed in the territory of the EU. It serves as one of the core revenue sources for the EU Member States and VAT rules play a very important role in the EU Single Market. In 2021, the contribution of VAT accounted for approximately 27 percent of the total yearly tax receipts for general government in the EU[^1]. It is also used as a reference to calculate the EU’s own resources. A rate of 0.3 percent applies to each EU member’s harmonised VAT base. Thus, VAT-based resources in 2021 amounted to 17.97 EUR billion and 11 percent of the EU’s total own resources.

One of the key challenges of meeting the fiscal objective of VAT is taxpayer non-compliance with VAT payment obligations. The forms of such non-compliance range from the legal exploitation of loopholes in tax systems to evasion or organised large-scale tax fraud. These are the underlying drivers of the VAT compliance gap, the difference between the tax revenue that would be collected in the case of full compliance and the actual VAT receipts. Non-compliance could also be non-intentional and result, among others, from administrative errors, omissions, and non-fraudulent bankruptcies. Tax fraud, evasion, and avoidance, which are the core interest of this study, cost EU Member States’ budgets billions of euros every year. They also threaten the principle of fair taxation and impede fairness of competition between businesses.

Other important sources of the forgone VAT revenue are the policy decisions narrowing the tax base or reducing VAT liability for certain parts of the tax base. These choices are made to meet distributional objectives or to provide certain incentives for taxpayers at the cost of VAT revenue. They could also be taken due to difficulties imposing payments on certain taxpayers or on certain types of goods and services. The policy decisions reducing tax revenue are often referred to as tax expenditures. The fiscal cost of the VAT expenditures is highly inter-related with the broad measure of the departure of the VAT base and effective rates from the notional VAT system, the so-called VAT policy gap, which is also addressed by this report. The policy gap is an indicator of the additional VAT revenue that could theoretically (i.e., under the assumption of perfect tax compliance) be generated if a uniform VAT rate is applied to the final domestic use of all goods and services by households.

The relevance of the problem of lost VAT revenue due to non-compliance and the design of the VAT rules would be largely unknown without tax gap estimates. These estimates not only serve as a useful tool to understand the overall size of the revenue losses in VAT but also help to understand their nature, which is crucial for making well-grounded policy decisions and improvements to tax administration. The estimates of the tax gap components and their evolution in time provide insights on the strategies and measures that improve the efficiency of VAT collection.

I. Economic and policy context in the EU

In 2021, both real and nominal GDP increased in all 27 EU Member States. This growth was to a large extent a result of the gradual recovery of economies from the effects of the COVID-19 pandemic. Given this context, macroeconomic figures for 2021 are hard to compare against any other recent year. In total, the EU-27 economy grew by 5.6 percent in real terms compared to 2020.

Another factor influencing VAT compliance may be the level of support measures, which are often contingent on paying taxes. In 2021, several EU Member States introduced temporary changes to their VAT systems. All in all, the total net balance of general government in the EU-27, which may serve as an indicator of the strength of support measures and economic situation, rose from -6.7 percent in 2020 to -4.8 percent in 2021.

VAT compliance might also be affected by changes in the structure of expenditure – changes in the share of purchases of services provided by sectors where non-compliance tends to be higher, for example those related to tourism, hospitality, and entertainment can impact overall compliance.

The number of bankruptcies – which could be treated as an indicator of broader liquidity problems – rose in the first three quarters of the year compared to the same period in 2020, with the largest increase (27.1 percent) in Q2 and smallest in Q4 (by 5.0 percent). This increase could suggest that, despite the recovery, many firms suffered from the economic turbulences related to the pandemic and the gradual withdrawal of support measures.

II. VAT compliance gap in the EU

Total EU-27 VAT revenue and VAT liability increased in all years except for 2020, where both fell below the levels observed in 2017. In 2021, revenue and liability recovered and exceeded the values observed before the COVID-19 pandemic. Amid these extraordinary conditions, the VAT compliance gap continued to narrow albeit at a significantly faster pace.

In 2021, the VAT compliance gap amounted to EUR 60.6 billion or – in relative terms – 5.3 percent of the VAT Total Tax Liability (VTTL) - the tax revenue that would be collected in the case of full compliance-. Compared to 2020, the gap went down by EUR 38.7 billion or 4.3 percent of the VTTL (see Figure 1).

The unprecedented decline of the EU-wide VAT compliance gap of over EUR 65 billion and over 5 pp between 2019 and 2021 calls for a thorough examination of the underlying data sources and assumptions. The change in the VAT compliance gap between 2019 and 2021 was driven primarily by shifts in the VAT revenue, whereas the estimated VTTL in 2021 was nearly identical to its value observed in 2019, before the COVID-19 pandemic.

This suggests that the changes in the VAT compliance gap result from shifts in “recorded values” rather than changes in the estimated “unobserved” revenue potential. The stability of the VTTL was accompanied by the stability of its two main components, the nominal base, and the effective rate.

---

Although there is some uncertainty around certain components of the calculation, much of the reduction in compliance appears to be robust and justified by the sharp increase in VAT receipts. The estimates of the VAT compliance gap are subject to revision due to future updates of national accounts figures, but a substantial revision of the EU-wide trend of VAT compliance is unlikely.

III. VAT policy gap in the EU

The VAT policy gap captures the effects of the departure of the tax base from the theoretical one and lower than standard VAT rates applied to certain parts of the tax base. Compared to the VAT compliance gaps, the VAT policy gaps have remained much more stable. For the EU-27 overall, the average VAT policy gap level in 2021 was approximately 44.9 percent of the notional ideal revenue, which is a slight, 0.3 pp, decline from the value recorded in 2020. At the same time, the public services gap further increased, which indicates an incline in expenses on public services, mostly medical treatment. In nominal terms, the policy gap in 2021 amounted to EUR 1 127 billion, which, due to an incline in the overall tax base largely driven by price inflation, was approximately EUR 77 billion higher than in 2020.

Of the average value of 44.9 percent, in 2021, approximately 10.4 percent can be attributed to the application of various reduced and super reduced rates. The VAT exemption gap, interpreted as the share of notional ideal revenue forgone due to exemptions or maintaining components of household final consumption outside the VAT base, was on average 34.5 percent in 2021.

---

*It is important to note that the 2020 results consider the EU-27, accounting for BREXIT in January 2020. As a reference, some graphs and tables until year 2019 present the EU-28 estimates including the UK.*
IV. VAT compliance and policy gaps – results for Austria

This section presents the VAT gap estimates and discusses the economic and policy developments that might have affected value and dynamics for Austria. The chapter also contains highlights enumerating and discussing the main developments in the VAT gaps as well as calculation-related issues. It also presents road signalling which indicates the confidence around the VAT compliance gap.

- Estimates based on relatively up-to-date information with no or very limited unexplained volatility which could signal inaccuracies.
- Estimates based on somewhat outdated information or relatively large unexplained volatility of estimates.
- Estimates based on some very outdated information or very large unexplained volatility of estimates.

Austria

Economic and policy context

With 4.6 percent GDP growth in 2021, the economy of Austria had not yet reached its 2019 pre-COVID-19 level. This has been partially caused by a further increase in the intensity of COVID-19 measures in the first quarter of 2021. These strict lock-down measures in the beginning of 2021 resulted in a strong decline of foreign tourist stays in the winter 2020/21 season leading to a strong decline in the nights spent by tourists (of -15.7 percent). Inflation, measured as the total change in the HICP, is at 2.8 for 2021 and broadly in line with the average in the EU-27. Nominal consumption expenditures of households and NPISH went up by 5.9 percent whereas GFCF increased by 12.8 percent, leading to the rebound of the VTTL.

During 2017-2021, GDP growth in Austria was rather sluggish (+1.7 percent over four years). GDP increased only modestly despite the substantial hike in GFCF (23.2 percent in nominal terms). Price inflation was above the EU average as the change in prices over the period was 8 percent. Importantly, Austria has a very high tourism intensity with 11.8 nights per inhabitant for the period 2017 to 2021. The partial recovery in tourist arrivals has likely hampered the growth rates of the VTTL between 2017 and 2021.

Highlights

- Significant changes to VAT rate matrix introduced in 2020 have been maintained throughout 2021. This includes the reduction of the VAT rate for non-alcoholic beverages (from 20 percent to 10 percent) as well as hospitality and selected cultural services (from 10 percent to 5 percent).
- This resulted in stabilization of the policy gap at a new level – in 2021 it amounted to 49.1 percent of notional ideal revenue, compared to around 45-46 percent in years preceding the shift.
- After a relatively stable period between 2017 and 2020, the VAT compliance gap in Austria fell in 2021 by 3.8 pp and reached 2.8 percent of the VTTL. The increase in compliance was accompanied by relatively slow economic growth and a decrease in the economy-wide effective rate. As a result, Austria is one of few countries where the VTTL in 2021 was still lower than it was in 2019 (and also 2018).

V. Data availability and reliability

The major risk factor for the study and its continuation in the future is related to the availability of the data necessary to calculate the VTTL model parameters. As discussed in EC/CASE (2022), it was expected that in total less than 50 percent of the information that was gathered earlier from the Own Resource Submission (ORS) would be available for the calculation of the 2021 VTTL in this vintage of the study. Moreover, the availability of information was expected to vary substantially across Member States. In addition to the scarcity of granular and timely information necessary to calculate model parameters, some delays and inaccuracies in national accounts data caused by the COVID-19 pandemic were expected. In addition to the inaccuracies related to availability, timeliness, and granularity of information, the accuracy of VAT compliance gap estimates could largely be affected by the content and quality of the information. However, the quality of the aggregate information used in the calculation cannot be fully controlled for.

This study supported the projection from the earlier analysis. Around 60 percent of the overall information used earlier for estimating model parameters was made available for the study team. The information needed to estimate the most important parameters was available, sufficiently granular, and up to date for over 80 percent of the Member States.

This indicates that the accuracy of estimates has not decreased dramatically and that the continuation of the top-down consumption-side approach is still the only method that can be employed for all Member States. The exchanges with Member State administrations signalled that most of the Member States continue to gather relevant data and that they are able to share it for the purposes of the VAT Gap in the EU study.

For a comprehensive overview of the data availability and reliability, as well as scope and methodology of the study, please consult the full resource VAT Gap - European Commission (europa.eu)
GETTING IN TOUCH WITH THE EU

In person

All over the European Union there are hundreds of Europe Direct information centres. You can find the address of the centre nearest you at: https://europa.eu/european-union/contact_en

On the phone or by email

Europe Direct is a service that answers your questions about the European Union. You can contact this service:

– by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
– at the following standard number: +32 22999696 or
– by email via: https://europa.eu/european-union/contact_en

FINDING INFORMATION ABOUT THE EU

Online

Information about the European Union in all the official languages of the EU is available on the Europa website at: https://europa.eu/european-union/index_en

EU publications

You can download or order free and priced EU publications at: https://publications.europa.eu/en/publications. Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see https://europa.eu/european-union/contact_en).

EU law and related documents

For access to legal information from the EU, including all EU law since 1952 in all the official language versions, go to EUR-Lex at: http://eur-lex.europa.eu

Open data from the EU

The EU Open Data Portal (http://data.europa.eu/euodp/en) provides access to datasets from the EU. Data can be downloaded and reused for free, for both commercial and non-commercial purposes.
